

Print Tattoo – How to prepare

This is how it works

WITH LAYOUT TEMPLATE FOR GRAPHIC DESIGNERS

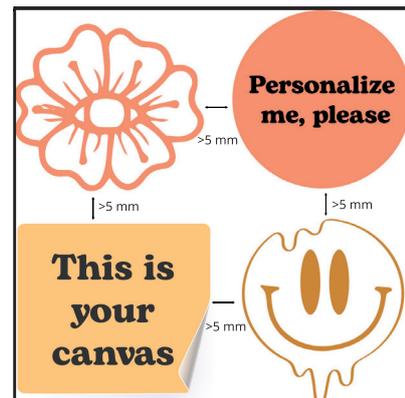

Preparing print data for your Print Tattoos is quick and easy. Simply follow the steps below:

- 1. Download the layout template**
www.print-tattoo.com/layout-templates/?lang=en
- 2. Open the template**
Open the template in the graphics software of your choice (we recommend Adobe Illustrator).
- 3. Design & save your artwork**
Edit the template and save it as a PDF, JPEG, or TIFF file.
- 4. Upload print data**
Upload your print data in the online shop.

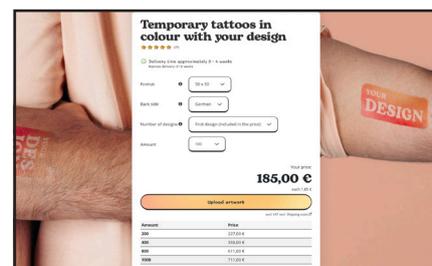

IMPORTANT NOTES FOR PERFECT PRINT RESULTS

- Multiple objects on one sheet: Please ensure a minimum distance of **5 mm** between individual motifs.
- Maximum upload / file size: **10 MB**
- Image resolution: **300–450 dpi**
- Please create your artwork without transparency or transparent effects.
- No clipping paths / cut-out paths.
- All graphics and fonts must be embedded or converted to outlines for optimal display.
- Please save your file as a standard **PDF/X-4, JPEG, or TIFF** using the colour profile **ISO Coated v2 (300%)**.

ALTERNATIVE FOR NON-DESIGNERS:

Upload your artwork in high resolution as JPEG, PDF, or TIFF directly in our online shop. Click “upload artwork” and place your motif using the designer tool. Once your order is received, we will automatically adapt the file to the selected format.

Print Tattoo – How to prepare

This is how it works

PRINT PREVIEW

Upload your design exactly as you want it to appear on the skin. For production reasons, we print your design mirrored so that it appears correctly oriented when applied to the skin.

WHITE ELEMENTS

Does your design include white elements? Please select the product "colour tattoo". White ink will be printed to ensure vibrant colours and visible white areas. Only the design will have a white base layer – the background remains transparent.

- If you order a black tattoo, it will be printed without white ink.
- If you order a colour tattoo, it will be printed with white ink.

METALLIC TATTOOS (GOLD, SILVER, BRONZE)

Metallic tattoos can only contain graphics or lettering – no photos. Your design will be printed in your selected metallic tone (gold, silver, or bronze). Please make sure that all lines are at least 0.5 mm thick.

GLITTER TATTOOS

With glitter printing, a layer containing glitter particles is printed underneath the regular colour print. These particles reflect light and create a sparkling effect. You can prepare your print data as standard full-colour artwork. During production, we automatically apply a full-surface glitter layer to your design. Please note: The glitter effect is always applied to the entire tattoo sheet – every single motif will be fully glittered.
